

HTML DOM IN ANGULARJS

- The AngularJS provides directives for binding application data to the HTML DOM element's attribute.
- These are the HTML DOM attributes used in AngularJS.
 - Show as [ng-show](#) directive.
 - Hide as [ng-hide](#) directive.
 - Disabled as [ng-disabled](#) directive.

Syntax for Select Box in AngularJS:

```
<element ng-show="Boolean value"></element>
```

and

```
<element ng-hide="Boolean value"></element>
```

and

```
<element ng-disabled="Boolean value"></element>
```

Sample code for HTML DOM in AngularJS:

```
<!DOCTYPE html>
<html>
  <head>
    <title>Wikitechy AngularJS Tutorials</title>
    <script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.5.6/angular.min.js">
</script>
  </head>
  <body>
    <div ng-app="myApp" ng-controller="DOMCtrl" >
      <h3>HTML DOM in AngularJS</h3>
      Enter Name :
      <input type="text" ng-model="name" ng-hide="myhide" ng-
show="myshow" ng-disabled="mydisabled" />
      <p>myhide : {{myhide}}</p>
      <p>myshow : {{myshow}}</p>
      <p>mydisabled : {{mydisabled}}</p>
      <input type="button" value="Show" ng-click="showFun()" />
      <input type="button" value="Hide" ng-click="hideFun()" />
      <input type="button" value="Disable" ng-click="disFun()"/>
    </div>
    <script>
      var app = angular.module("myApp", []);
      app.controller("DOMCtrl", function($scope) {
        $scope.showFun = function () {
          $scope.myhide = false;
          $scope.myshow = true;
          $scope.mydisabled = false;
        };
        $scope.hideFun = function () {
          $scope.myhide = true;
          $scope.myshow = false;
        };
      });
    </script>
  </body>
</html>
```

```
$scope.mydisabled = false;  
};  
$scope.disFun = function () {  
    $scope.myhide = false;  
    $scope.myshow = true;  
    $scope.mydisabled = true;  
};  
});  
</script>  
</body>  
</html>
```

Data:

- Set of data has been used in our AngularJS Application.

```
myhide = false;  
myshow = true;  
mydisabled = true;
```

HTML:

- Viewable HTML contents in AngularJS Application.

```
<div ng-app="myApp" ng-controller="timeCtrl" >  
    <h3>HTML DOM in AngularJS</h3>  
    Enter Name :  
    <input type="text" ng-model="name" ng-hide="myhide" ng-  
    show="myshow" ng-disabled="mydisabled" />  
    <p>myhide : {{myhide}}</p>  
    <p>myshow : {{myshow}}</p>
```

```
<p>mydisabled : {{mydisabled}}</p>
<input type="button" value="Show" ng-click="showFun()" />
<input type="button" value="Hide" ng-click="hideFun()" />
<input type="button" value="Disable" ng-click="disFun()"/>
</div>
```

Logic:

- Controller logic for the AngularJS application.

```
app.controller("tableCtrl", function($scope, $interval) {
  $scope.showFun = function () {
    $scope.myhide = false;
    $scope.myshow = true;
    $scope.mydisabled = false;
  };
  $scope.hideFun = function () {
    $scope.myhide = true;
    $scope.myshow = false;
    $scope.mydisabled = false;
  };
  $scope.disFun = function () {
    $scope.myhide = false;
    $scope.myshow = true;
    $scope.mydisabled = true;
  };
});
```

Code Explanation for HTML DOM in AngularJS:

```

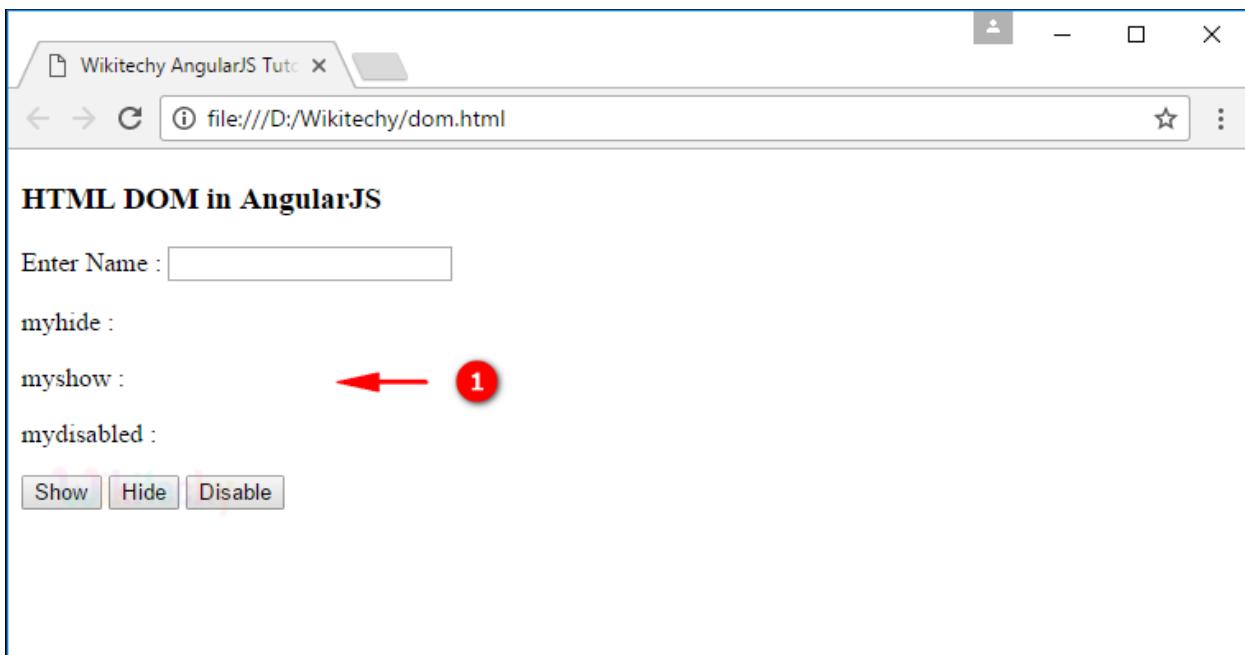

<!DOCTYPE html>
<html>
<head>
    <title>Wikitechy AngularJS Tutorials</title>
    <script src="https://ajax.googleapis.
        com/ajax/libs/angularjs/1.5.6/angular.min.js"> </script>
</head>
<body>
    <div ng-app="myApp" ng-controller="DOMCtrl">
        <h3>HTML DOM in AngularJS</h3>
        Enter Name :
        <input type="text" ng-model="name" ng-hide="myhide"
            ①
            ng-show="myshow" ng-disabled="mydisabled" />
            ②
            ③

        <p>myhide : {{myhide}}</p>
        <p>myshow : {{myshow}}</p>
        <p>mydisabled : {{mydisabled}}</p>
        ④ <input type="button" value="Show" ng-click="showFun()" />
        ⑤ <input type="button" value="Hide" ng-click="hideFun()" />
        ⑥ <input type="button" value="Disable" ng-click="disFun()"/>
    </div>
    <script>
        var app = angular.module("myApp", []);
        ⑦ app.controller("DOMCtrl", function($scope) {
            ⑧ $scope.showFun = function () {
                $scope.myhide = false;
                $scope.myshow = true;
                $scope.mydisabled = false; };
            ⑨ $scope.hideFun = function () {
                $scope.myhide = true;
                $scope.myshow = false;
                $scope.mydisabled = false; };
            ⑩ $scope.disFun = function () {
                $scope.myhide = false;
                $scope.myshow = true;
                $scope.mydisabled = true; };
            });
    </script>
</body>
</html>

```

1. The ng-hide directive is used to hide or show the textbox by changing the Boolean value **myhide**.
2. The ng-show directive is used to hide or show the textbox by changing the Boolean value **myshow**.
3. The ng-disabled directive is used to disable or enable the textbox by changing the Boolean value **mydisabled**.
4. The “**Show**” button used to call the “**showFun()**” function.
5. The “**Hide**” button used to call the “**hideFun()**” function.
6. The “**Disable**” button used to call the “**disFun()**” function.
7. The “**DOMCtrl**” used to create the controller for the Application with **\$scope** object argument.
8. The **showFun** is a function used to set **myshow** as **true**, **myhide** and **mydisabled** as **false** variable.
9. The **hideFun** is a function used to set **myhide** as **true**, **myshow** and **mydisabled as false** variable.
10. The **disFun** is a function used to set **mydisabled** and **myshow** as **true** and **myhide as false** variable.

Sample Output for HTML DOM in AngularJS:

HTML DOM in AngularJS

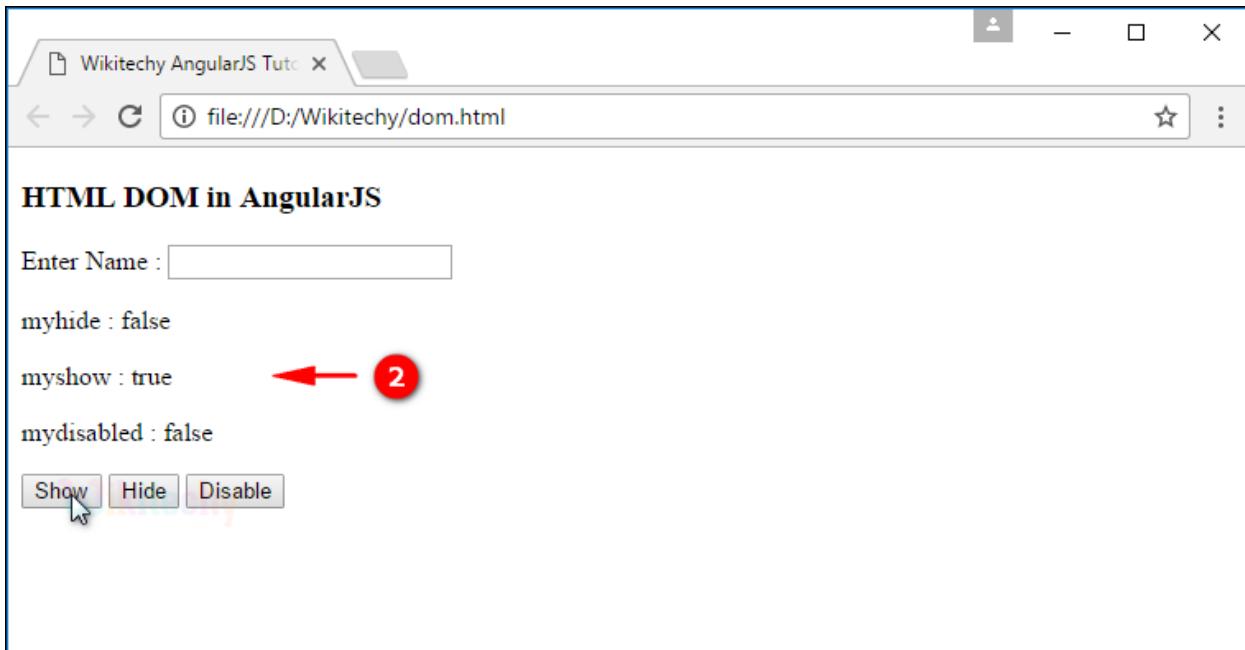

Enter Name :

myhide :

myshow : ← 1

mydisabled :

1. The Values are empty on the page load.

HTML DOM in AngularJS

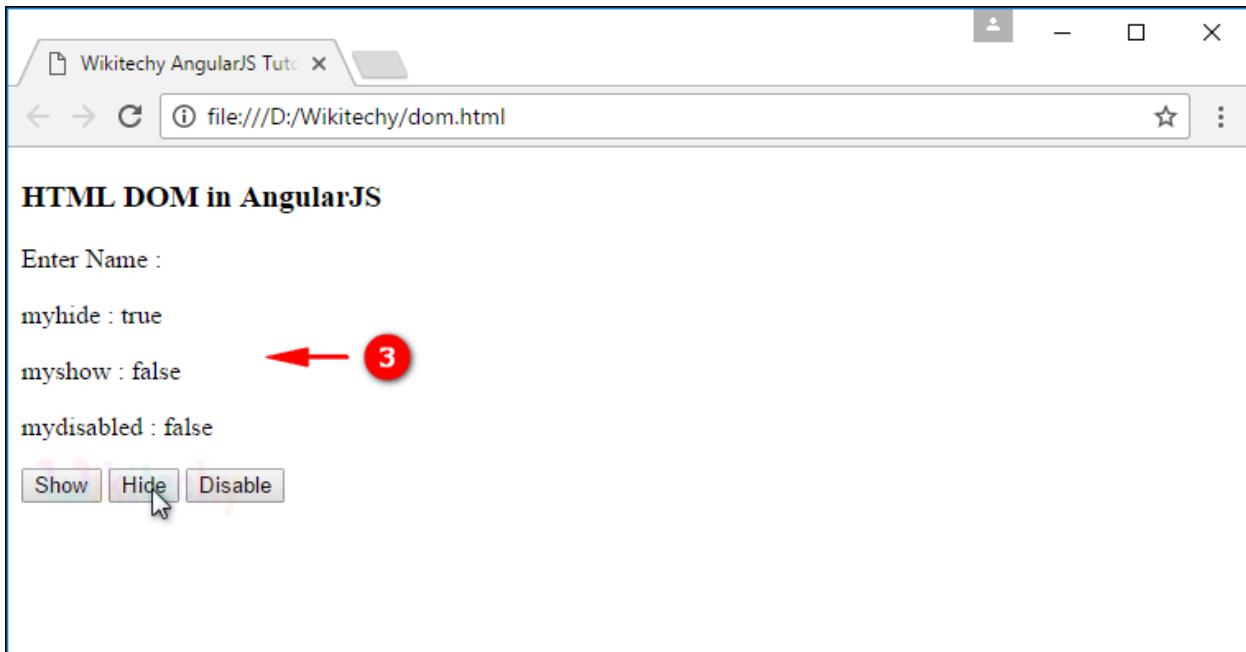

Enter Name :

myhide : false

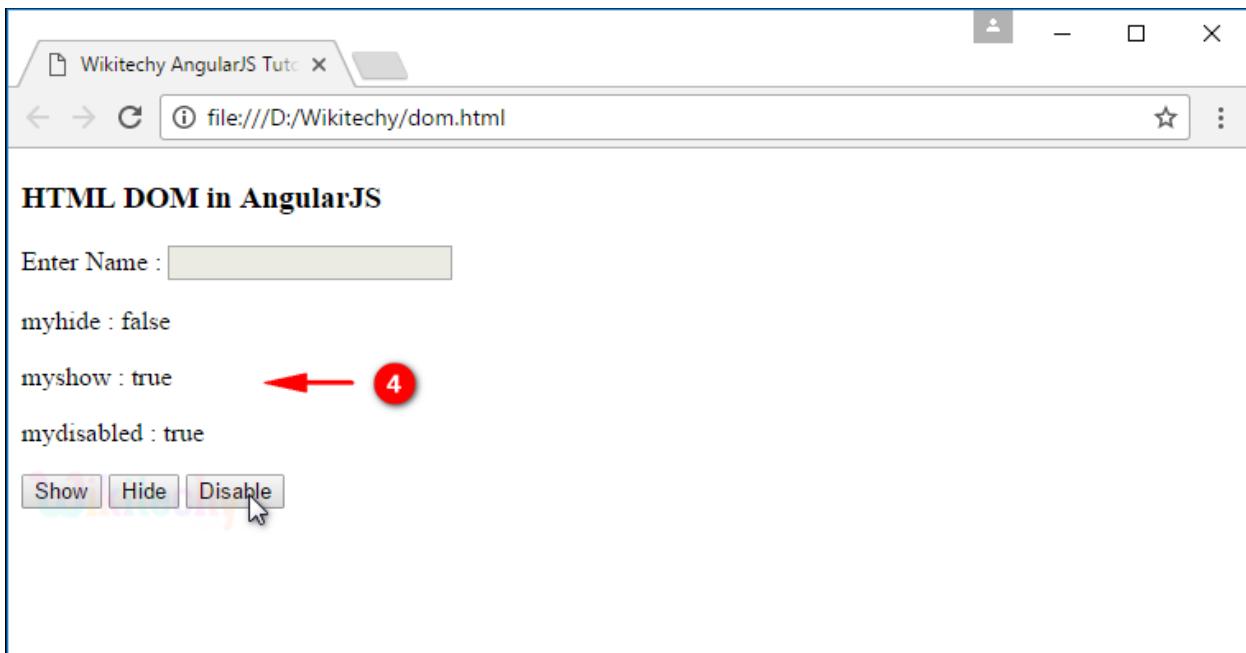

myshow : true ← 2

mydisabled : false

2. When user click the **Show** button then the textbox will be visible.

3. When user Click the **Hide** button then the textbox will be disappear.

4. When user click the **Disable** button then the textbox will be disabled so that user cannot edit the text.
