

HTML Basic Structure

- All HTML documents have a required structure that includes the following declaration and elements. They are `<html>`, `<head>`, `<body>`.
- Inside the `<html>` element the `<head>` element identify the top of the document which includes the metadata information of the page.
- The content within the `<head>` element is not displayed on the webpage.
- All the content of the webpage was given within the `<body>` element.

Note: Only the content inside the `<body>` (the white area above) is displayed in a browser.
